Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

o, The present sequence represents a hyaluronan-binding protein. The specification describes four hyaluronan-binding protein, known as WF-HABP, WF-HABP, OE-HABP, and BM-HABP. The polypeptides are useful for treating diseases such as proliferative conditions, metastasis, inflammation, ischemia, host defence dysfunction, immune surveillance dysfunction, archritis, multiple sclerosis, autoimmunity, immune dysfunction and allergy Gaps ó 97.7%; Score 345; DB 3; Length 353; 100.0%; Pred. ```

The present invention relates to sequences for rat and human HARE (Hyaluronic Acid Receptor for Endocytosis, ABA04649, ABA04662, AAA47675 and AAA47684). HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is human HARE

New mammalian hyaluronic acid receptor for endocytosis, useful e.g. for identifying agents that inhibit binding to hyaluronic acid, and related

Claim 20; Fig 33; 263pp; English.

nucleic acid

```
The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) receptor for endocytosis (HARE) or a cell that does not express tunctionally active HARE. The method involves using HA molecule, a chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The expressing HARE on its surface (e.g. gene therapy). Also described is agent or a radioisotope to cell of an individual, especially a human, expressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing interaction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its surface. This second method is useful for preventing metastrasis by c preventing interaction between tumour cells having HA, CD or CDS coat and non-tumour cells expressing HARE on its surface. The invention also cessing that its enchod useful for detecting the presence of HA, CD and CDS in captor for endocytosis (HARE)

The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) creceptor for endocytosis (HARE) or a cell that does not express functionally active HARE. The method involves using HA molecule, and chondroitin molecule (CD). a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The method is useful for targeting a compound, preferably a chemotherapeutic agent or a radioisocope to cell of an individual, especially a human, cxpressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing interaction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its surface. This second method is useful for preventing metastasis by come of a HA coat, a CD coat and CDS coat and concurrent cells expressing HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This is the amino acid sequence of a longer version of the human libotha Hyaluronan receptor for endocytosis (HARE) shown in

The invention relates to the NOV1-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomedulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased expression. They excitiving mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes in assays to

detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may also be used as antigens in the production of antibodies (Abs) against NOVX and in Sasays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV7, NOV9-11 and NOV1-16 have casein kinase II phosphorylation sites characteristic of serine-threonine kinases. and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (EGF) like super family and are involved in, e.g. regulation of cell structure and motility and protein management, and are used to treat cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease e.g. hypertrophic cardiomyopathy, long-QT

```
This sequence is the NOVB protein. The invention relates to the NOV1-
NOV16 proteins, and their coding sequences. The proteins have Cytostatic;
contraceptive; antiinflammatory; immunoadulatory; and cardiovascular
activities. The sequences may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate NOVX expression. They
cretifying mutations or deletions in a patient's genome that affect the
activity of protein by expressing inactive proteins or to supplement the
patients own production of protein. They are used to produce NOVX
cretifying mutations or deletions in They are used to produce NOVX
cretifying mutations of protein. They are used to produce NOVX
cretifying mutations of protein. They are used to wish also be used
activity of protein. The DNA may be used as DNA probes in assays to
detect and quantitate the presence of similar DNAs in samples, and which
patients may need restrative therapy. The NOVX protein may also be used
as antigens in the production of antibodise (Abs) against NOVX and in
assays to identify modulators of NOVX expression and activity. The anti-
NOVX Abs and antagonist are used for detecting the presence of NOVX
in samples. Disorders that may be prevented, diagnosed and/or treated
activity. The anti-NOVX Abs are used for detecting the presence of NOVX
in samples. Disorders that may be prevented, diagnosed and/or treated

The present invention provides the protein and coding sequences of several novel human proteins, designated NoWX. These can be used in the treatment of diseases such as cancer, Hodgkin's disease, Von Hippellindau syndrome, Alzheimer's disease, stroke, tuberous sclerosis, hypercalcaemia, Parkinson's disease, Huntington's disease, cerebral palsy, Lesch-Nyhan syndrome, multiple sclerosis, azaxia telangiectasia, leukodystrophies, addiction, anxiety, depression, pain, obesity, Crohn's disease, inflammatory bowel disease,

This sequence is the NOV6 protein. The invention relates to the NOV1
NOV16 proteins, and their coding sequences. The proteins have Cytostatic;

NOV16 proteins, and their coding sequences. The proteins have Cytostatic;

Contraceptive; antiinflammatory; immunomodulatory; and cardiovascular

activities. The sequences may be used in the prevention, diagnosis and

treatment of diseases associated with inappropriate NoVX expression. They

creatifying mutations or delations in a patient's genome that affect the

cativity of protein by expressing inactive proteins or to supplement the

patients own production of protein. They are used to produce NoVX

CC patients own production of protein. They are used to produce NoVX

CC proteins, by inserting the nucleic acid into a cell and culturing it to

express the protein. The DNA may be used as DNA probes in assays to

detect and quantitate the presence of similar DNAs in samples, and which

captients may need restorative therapy. The NOVX protein may also be used

as antigens in the production of antibodies (Abs) against NOVX and in

assays to identify modulators of NOVX expression and activity. The anti
NOVX Abs and antagonist are used to down regulate expression and

activity. The anti-NOVX has are used to down regulate expression and

cutivity. The anti-NOVX has are used to down regulate expression and

cutivity. The anti-NOVX has are used to down regulate expression and

cutivity. The anti-NOVX has are used to down regulate expression and

cutivity. The anti-NOVX has are used to down sequenced, diagnosed and/or treated

cutivity. The anti-NOVX protein. NOV1, NOV3, NOV7, NOV9-11 and

NOV13-16 have casein Khanse II phosphorylation sites characteristic of

contracted the procession and activity is and provenced and nove treated to a season the nove the presence of the presence of nove the nove of th Claim 1; Page 24-25; 141pp; English.

AAC7446 to AAC77606 encode the proteins given in ABB40237 to AABB43397,
which represent the human ORRX open reading frames 1 to 3161. The ORFX
cequences have activities such as: cytostatic; hepatotropic, vulnerary;
antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
cardiant; thrombolyvic; coagulant; vasotropic; antidiabelic; hypotensive;
dermatological; immunosuppressive; antinhtamatory; antibacterial;
antiviral; antifungal; antirheumatic; antithyroid; and antiansemic. The
sequences can be used for determining the presence of or predisposition
to, or preventing or treating pathological conditions associated with an

This sequence is the NOV2 protein. The invention relates to the NOV1-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the procein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, and which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NoVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/thronine kinases, and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (BGF)-like supper family and are involved in, e.g. regulation of cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cellular adhesion disorders nov6-like fibrillin proteins and are used to treat cancers, treat candiovascular disease e.g. hypertrophic cardiowpoathy, long-QT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   patients may need restorative therapy. The NOVX protein may also be used as antigens in the production of antibodies (Abs) against NOVX and in assays to identify modulators of NOVX expression and activity. The anti-

tise inversion in the individual expressing a functionally active hyaluronan (HA) receptor for endocytosis (HARE) or a cell that does not express that the functionally active HARE. The method involves using HA molecule, and chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The certhod is useful for targeting a compound, preferably a chemotherapeutic agent or a radioisotope to cell of an individual, especially a human, expressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing interaction between a cell having at least on of a HA coat, a CD coat and a cell expressing HARE on its sucreace. This second method is useful for preventing interaction between tumour cells having HA, CD or CDS coat and con-tumour cells expressing HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This sequence represents the LINK domain of the human cells than may be present in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                         The present invention relates to sequences for rat and human HARE (Hyaluconic Acid Receptor for Endocytosis, ABA04648, ABA04662, AAM47675 and AAM47684). HARE can bind specifically to at least one of hyaluconic acid (HA, also known as hyaluconan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is rat HARE

The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) creceptor for endocytosis (HARE) or a cell that does not express functionally active HARE. The method involves using HA molecule, and/or chondrottin molecule (CD), a chondrottin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The chond is useful for targeting a compound, preferably, a chemotherapeutic agent or a radioisotope to cell of an individual, especially a human, expressing HARE on its surface (e.g. gene therapy). Also described is a cone of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its surface. This second method is useful for preventing metastasis by preventing interaction between tumour cells having HA, CD or CDS coat and contunuour cells expressing HARE on its surface. The invention also concerning content of the surface of the coat and cDS in a biological fluid. This is the amino acid sequence of the rat 175kDa cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cancer related protein; food additive; preservative; immunogen; antibody; bone cancer; adrenal cancer; bone marrow cancer; breast cancer; gastrointestinal cancer; liver cancer; lung cancer; urogenital cancer; immune disorder; Addison's disease; allergy; diabetes mellitus; autoimmune haemolytic anaemia; autoimmune thyroiditis; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; acquired immunodeficiency syndrome; AIDS; cardiovascular disorder; parkinson's disease; wound healing; neurological disorder; parkinson's disease; Albeimer's disease, cerebral anoxia; epilepsy; viral infection; bacterial infection; fungal infection; epilepsy; parasitic infection; agonist; antagonist.
                                                                                                                                                                                                                                                                Targeting compounds e.g. chemotherapeutic agent to cell of subject expressing functional active hyaluronan receptor for endocytosis of HARE, by using hyaluronan, HARE, and/or monoclonal antibody that binds to HARE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ·,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents a novel Human cancer related protein. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condution in e.g. humans, mice, rabbits, goats, cares, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The polynucleotide are useful for chromosome capabilities. The polynucleotide are useful for chromosome capabilities are useful in the diagnosis, reatment and prevention of antagonists are useful in the diagnosis, reatment and prevention of cancer (e.g. cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital), immune disorders (e.g. Addison's disease, allergies, autoimmune thromoditis, diabetes mellitus, Crohn's disease, multiple autoimmune thryroiditis, diabetes mellitus, Crohn's disease, multiple immunodeficiency syndrome, AIDS), cardiovascular disorders such as myocardial ischaemias, wound healing, neurological diseases (e.g. myocardial ischaemias, wound healing, neurological diseases (e.g. and infectious diseases, Alzheimer's disease, cerebral anoxia and epilepsy) and infectious diseases such as viral, bacterial, fungal and parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            o;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hyaluronan receptor for endocytosis; HARE; hyaluronan; HA; CD;
chondroitin molecule; chondroitin sulphate; CDS; targeting; metastasis;
tumour; gene therapy; human; motif.
                                                                                                                                                                                                                                                                                                                                                                           Twenty nine nucleic acid molecules encoding human cancer associated proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps

The invention describes a method of targeting a compound to a cell or tissue of an individual expressing a functionally active hyaluronan (HA) creceptor for endocytosis (HARE) or a cell that does not express treceptor for endocytosis (HARE) or a cell that does not express cfunctionally active HARE. The method involves using HA molecule, and/or chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or condition antibody raised against a HA-binding domain of HARE. The condition of a uniformation of an individual, especially a chemotherapeutic agent or a radioisotope to cell of an individual, especially a human, conserver and the surface (e.g. gene therapy). Also described is a method useful for preventing interaction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on its second method is useful for preventing metastasis by preventing interaction between tumour cells having HA, CD or CDS coat and cDS coat and cDS in contumour cells expressing HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This sequence represents a putative motif from the human 190kDa Hyaluronan receptor for endocytosis (HARE) that may be present in other HARE-like proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HARE; Hyaluronic Acid Receptor for Endocytosis; hyaluronan; chondroitin; chondroitin sulphate; extracellular matrix; cartilage; skin; human; rat; vitreous humour; endocytic receptor; glycosaminoglycan.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention relates to sequences for rat and human HARE (Hyaluronic Acid Receptor for Endocytosis, ABA04649, ABA04662, AAM47675 and AAM47649. HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in sulphate artillage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is a peptide fragment of HARE, which was used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HARE; Hyaluronic Acid Receptor for Endocytosis; hyaluronan; chondroitin; chondroitin sulphate; extracellular matrix; cartilage; skin; human; rat; vitreous humour; endocytic receptor; glycosaminoglycan.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mammalian hyaluronic acid receptor for endocytosis, useful e.g. for identifying agents that inhibit binding to hyaluronic acid, and related nucleic acid.
                                                                                                                                   New mammalian hyaluronic acid receptor for endocytosis, useful e.g. for identifying agents that inhibit binding to hyaluronic acid, and related

                                The present invention relates to sequences for rat and human HARE (Hyaluronic Acid Receptor for Endocytosis, ABA04648, ABA04662, AAM47675 and AAM47649. HARE can bind specifically to at least one of hyaluronic acid (HA, also known as hyaluronan), chondroitin (C) or chondroitin sulphate (CS). HA is an extracellular matrix component of all tissues, in particular cartilage, skin and vitreous humour. HARE is the endocytic receptor responsible for removing HA and other glycosaminoglycans from the circulation. The present sequence is a peptide fragment of HARE, which was used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Targeting compounds e.g. chemotherapeutic agent to cell of subject expressing functional active hyaluronan receptor for endocytosis of HARE, by using hyaluronan, HARE, and/or monoclonal antibody that binds to HARE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tissue of an individual expressing a functionally active hydranoran (HA) receptor for endocytosis (HARE) or a cell that does not express functionally active HARE. The method involves using HA molecule, a chondroitin molecule (CD), a chondroitin sulphate (CDS) molecule, and/or a monoclonal antibody raised against a HA-binding domain of HARE. The method is useful for targeting a compound, preferably a chemotherapeutic expressing HARE on its surface (e.g. gene therapy). Also described is a method useful for preventing inceraction between a cell having at least one of a HA coat, a CD coat and CDS coat and a cell expressing HARE on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hyaluronan receptor for endocytosis; HARE; hyaluronan; HA; CD;

its surface. This second method is useful for preventing metastasis by preventing interaction between tumour cells having HA, CD or CDS coat and non-tumour calls expressing HARE on its surface. The invention also describes a method useful for detecting the presence of HA, CD and CDS in a biological fluid. This sequence represents a putative motif from the human 190kDa Hyaluronan receptor for endocytosis (HARE) that may be present in other HARE-like proteins

Bulk tissue was collected from a whole adult individual
from the Tuebingen strain. 1st strand cDNA was primed with
a Not I - oligo(dT) primer, double-stranded cDNA was
cloned into the Not I and EcoRV sites of pExpress-1.
Library was size-selected for >1 kb fragments and
normalized. A non-normalized version of this library is
also available (NIH ZGC 10). Library was constructed by
Open Biosystems (Huntsville, AL)"

Sanger Kenopus tropicalis EST project 2001
TROPICALIS_ENGURICE ID: TTpA048d24.plkaSP6
Sequencing primer: $P6
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Nigel Garrett.
cDNA was oligo dr primed from 5ug of poly A+ RNA from tadpole
embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with
Vector: pCS107; Site 1: EcoRI, Site 2: NotI
HOBE: Escherichia coli DH10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota, Metazca, Chordata, Craniata, Vertebrata, Euteleostomi,

CDNA was oliged Trimed from 5ug of poly A+ RNA from tadpole embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the 5' end and NotI at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site 2: NotI

Host: Escherichia coli DH10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240 AsnValSerMetPhePheTyrAsnAspLeuValAsnGlyThrThrLeuGlnThrArgLeu
